Eagleman begins by exploring the fundamental forces of nature, such as gravity and electromagnetism. He then shows how these forces interact to create the world we see around us, from the mountains and oceans to the stars and planets.

Eagleman next turns his attention to the human brain, which he argues is the most complex object in the known universe. He explores the brain's ability to process information, make decisions, and create memories. He

also shows how the brain is shaped by our experiences, and how these experiences can influence our thoughts and actions.

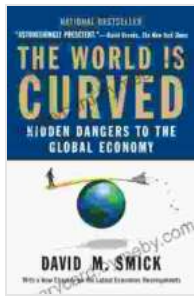

In the final part of the book, Eagleman looks at the big picture, exploring the hidden forces that shape our societies and cultures. He argues that these forces are not random, but rather are the result of the laws of physics and the workings of the human brain.

The World Is Curved is a must-read for anyone who wants to understand the world around them. Eagleman's writing is clear and engaging, and he does an excellent job of making complex concepts accessible to a general audience. The book is full of fascinating insights, and it will leave you with a new appreciation for the unseen forces that shape our reality.
